Clint Moore, Asst. City Manager of Planning & Development, [cmoore@cityofflorence.com](mailto:cmoore@cityofflorence.com) /843-665-2047

**FLORENCE, SC:** As part of the City of Florence Stormwater Capital Improvement Program, city staff in partnership with a Stormwater Engineering Team from AECOM, have developed a web page with access to a storyboard to educate and keep residents informed.

Residents can access this new resource at [www.cityofflorence.com](http://www.cityofflorence.com) on the homepage under “News & Announcements” titled, “Capital Improvements”, and will have the ability to learn more about the stormwater program and its challenges, as well as find up to date information on project details throughout the city. Residents can key in their address and determine if stormwater issues exist near their residence and be informed with a detailed description of planned work.

The site also includes a survey for residents. It is imperative that residents take the time to complete this information. City staff is requesting public input to help refine locations that are experiencing flooding, or drainage concerns in preparation of a Stormwater Master Plan. Signs of stormwater issues include flooded yards, impassable streets, discolored or foul-smelling stormwater runoff or sediment deposits after a storm. Participation by city residents is greatly appreciated.

For questions or assistance with the new site, please contact the Planning & Development Department at 843-665-2047.
